

# Galvan F-Series: The Only Listed Galvanized Ground Rod To Meet All RUS and NESC Utility Requirements ...Since 2008!

GALGR6258F  
c(SA)  
us LISTED

## Galvan leads the way in ground rod quality.

It's nothing new for Galvan to manufacture and list a galvanized ground rod that meets the most stringent quality requirements. **We introduced our F-Series in 2008** to provide utilities and other customers a **full-sized (.625" diameter) rod that meets all applicable standards.**

- **ANSI/NEMA GR-1** specification
- **LISTED to ANSI/UL 467 by CSA** for use in **US and Canada**
- **NEC** (National Electrical Code – Residential, Commercial and Industrial)
- **RUS** (Rural Utilities Service)
- **NESC** (National Electric Safety Code, for electrical utilities)

Unlike some nail-pointed rods, Galvan's conical ground rod point has no sharp edges to damage couplings.

**Most installers prefer the conical point on Galvan ground rods** to nail-pointed rods. The rough flashing edges on some nail-pointed rods can damage couplings, causing them to fail. Galvan 5/8" F-Series ground rods and GRC-625G couplings are perfectly matched for safer, easier, code-compliant installations.

See our online catalog, or your Galvan representative, for more information on our complete line of **UL and CSA listed ground rods** for utilities and electrical contractors, available in 5/8", 3/4" and 1" diameters. You can rely on Galvan ground rods and accessories.
