

# GALVAN -ized

## Only Galvan's Gold Series™ Galvanized Ground Rods Are UL Listed And NEC Compliant

Make sure your next project meets code from the ground up with Galvan Gold Series ground rods, the first galvanized rods to earn UL listing for full NEC compliance.

Galvan uses a high-strength steel core, stamped for traceability, and hot-dip galvanized — not plated or zinc painted — for superior corrosion protection. Available in honest eight and 10 foot lengths, the Gold Series features a true conical point and chamfered drive end for straighter driving and easier coupling. Why risk a lesser rod that may not pass inspection? Demand the Galvan Gold Series. It's the safe choice.
